SUMMARY

CS graduate with hands-on experience in DNS protocol implementation, packet analysis, and cloud infrastructure. Currently pursuing CCNA certification. Strong software engineering background enables rapid troubleshooting and automation across networked systems.

EDUCATION

University of California, Davis
Bachelor of Science in Computer Science

Dec. 2022

CERTIFICATIONS

Cisco Certified Network Associate (CCNA)
Cisco

In Progress – Expected 2026
Self-Study

EXPERIENCE

Freelance Computer Science Instructor
Self-Employed

Nov. 2025 – Present
Remote

- Work directly with students ages 8–13 weekly, teaching online private coding courses in Python, PyGame, Scratch, and C++
- Teach AI courses covering fundamentals of artificial intelligence and machine learning
- Simplify complex Computer Science problems tailored to each student's best method of learning to help build a strong programming foundation

Computer Science Instructor
Juni Learning

Jul. 2022 – Nov. 2025
Remote

- Worked directly with students ages 8–13 weekly, teaching online private coding courses in Python, PyGame, and Scratch
- Simplified complex Computer Science problems tailored to each student's best method of learning to help build a strong programming foundation

Backend Developer
#Include at Davis

Oct. 2021 – Apr. 2022
Davis, CA

- Designed and implemented RESTful API endpoints using Node.js and Express, with an emphasis on reliable data transmission and error handling across networked services
- Managed deployment and uptime of the NVSI website on Heroku, handling environment variables, service configuration, and cloud media storage via Cloudinary

PROJECTS

DNS Client & Server Implementation | *Python, Wireshark*

- Built a fully functional DNS client and server from scratch using Python's Socket API, implementing UDP transport over port 53 in compliance with DNS protocol specifications (RFC 1035)
- Constructed and parsed DNS query/response packets manually, including question, answer, authority, and additional record sections, deepening understanding of DNS resolution and name hierarchy
- Used Wireshark to capture and inspect live DNS traffic, validating packet structure, verifying correct flag behavior, and confirming end-to-end resolution accuracy

NVSI Website | *Node.js, Strapi, Heroku, Cloudinary, Next.js, Vercel*

- Led backend development for a production website, managing cloud deployments across Heroku (compute) and Cloudinary (media storage), with DNS and domain routing configured for public access
- Maintained Strapi CMS instance in a cloud environment, overseeing service health, content API availability, and cross-service connectivity between frontend (Vercel) and backend (Heroku)

TECHNICAL SKILLS

Networking: TCP/IP, UDP, DNS (RFC 1035), HTTP/HTTPS, RESTful APIs, Client-Server Architecture, Packet Analysis (Wireshark)

Cloud & Infrastructure: Heroku, Cloudinary, Vercel, Cloud Deployment & Configuration, Environment Management

Operating Systems: Linux (command line), Windows

Programming Languages: Python, JavaScript, C++/C#/C, HTML/CSS

Frameworks & Tools: Node.js, Express, React, Next.js, Strapi, Git
